Context

Equities and bonds generate their returns through different mechanisms, and provide investors an opportunity for better risk-adjusted return.

Opportunity

Holding both together moderates the movement of the portfolio, which makes a long-term position easier to maintain through the periods when assets classes move in opposite direction.

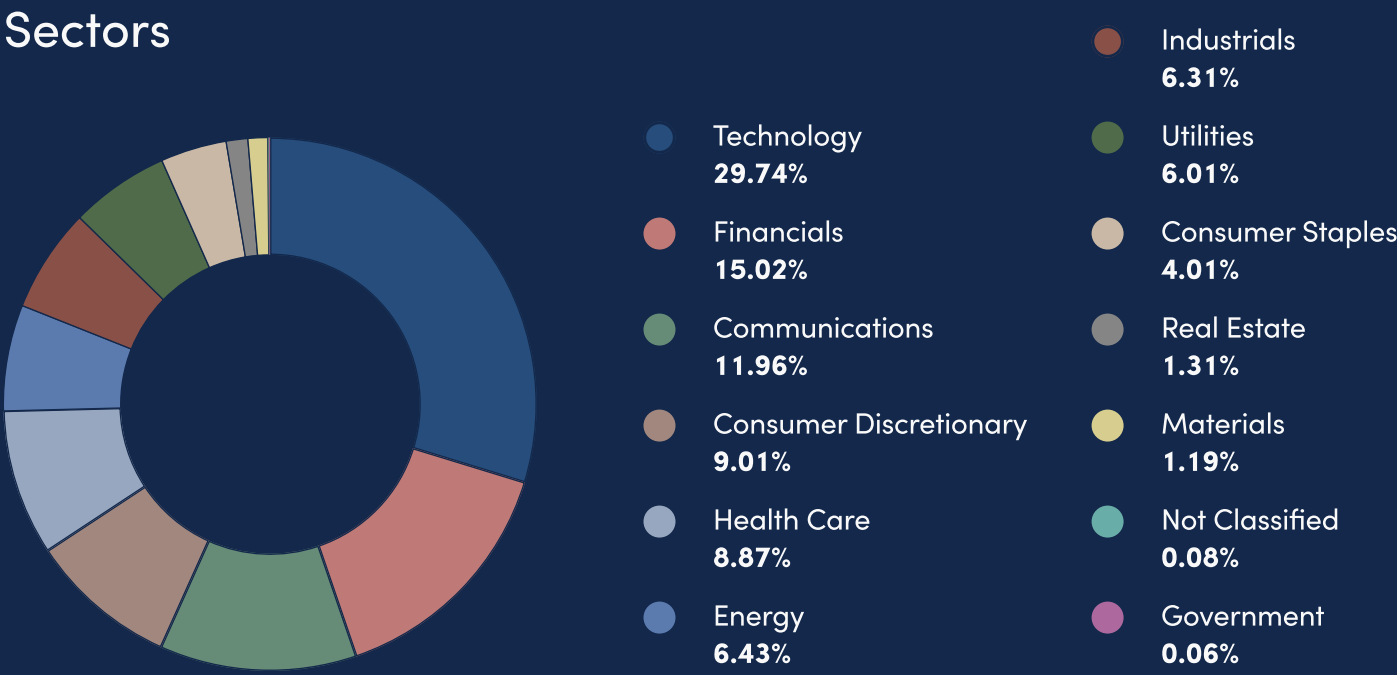

Strategy

The strategy combines high-quality global equities with highly rated US dollar investment-grade bonds. The equities provide the portfolio's growth; the bonds provide income and moderate its movement.

The balance between the two is actively managed and adjusted as market conditions and expectations change. It is measured against a 50/50 blend of the S&P 500 and the Bloomberg Euro Treasury index. Value is driven by capital appreciation, dividend and coupon income, and currency movements.
